

Tempo S2

Dough band former Tempo S2

1 machine description

The Juwel dough band former type **Tempo S2** has a working width of 420 mm. The strength of the finished dough band amounts approx. 4 mm (different strengths up to max. 6 mm are also possible). The dough from the top to the funnel delivered dough is delivered with two infeed rollers to the pressure chamber beneath it. The deep cutted infeed rollers provide an additional kneading process and a conflictless delivery of the dough to the pressure chamber. Through this working process the dough can be formed in an exact width and thickness to a homogeneous band by the corrugated rolls. The Juwel dough band former Tempo S2 is proving itself as a very robust and easy to clean machine since a bunch of years.

2 technical data

performance data

Drive	5 kW
Weight	600 kg
Performance	approx. 220 kg/h

dimensions

Length	910 mm
Width	940 mm
Height	1.870 mm
Band width	420 mm
Band strength	approx. 4 mm
